Introduction

- One stop solution for free stay, ride sharing, for solo travelers.
- The hitchhiker website allows house owners to be hosts who are willing to let travelers stay in their house for free.
- Travelers can look up for free stays and contact the host through the website.
- The hitchhike website also allows ride sharing by matching up passengers who need long-distance rides with drivers who are already headed in the same direction.
- Solo travelers can also join other solo travelers to travel together.

Problem Statement

- College students and travelers traveling with a low budget.
- Traffic caused by individual vehicles.
- Travelers do not get to know about local culture.

Our solution

- Save money by staying for free.
- Get to know about local culture by staying in a local house.

- Traffic controlling - Individuals heading to the same route instead of using separate vehicles can use one vehicle to reduce the traffic.
- It will use location services to guarantee efficiency, and simplify switching from one transport mode to another.
- Implementing a screening device in the website and creating mapped, designated pick-up zones with adequate lighting and shelter.

Features

- Free stay hosting by house owner
- Ride Sharing
 - For travelers and students
- Travel with other solo travelers
- Promo codes and offer for solo travelers
- Rating based System
 - To know in advanced about the host behavior
